## Vertical Farm

Arch 4015, 2026

Professor: Pe

Location: Penn Center West - Vineyard South

This project proposed a conversion of a visitor parking lot on the Georgia Tech campus into a vertically oriented urban farm. The building serves as a food distribution center for the community, while creating a walkable, accessible space for education, recreation, and social interaction. The design maximizes crop yield within a dense urban campus, and integrates energy-efficient strategies, such as solar orientation, passive heating/cooling, and material selection to optimize both building performance and agricultural output. Ultimately, the project serves as a model for sustainable urban development, showing how existing campus infrastructure can be reimaged to tackle food access, climate resilience, and land scarcity.

# Hastings Gantt Coastal Center

Arch 4015, 2024

Professor: Danielle Wilkens

Location: Penn Center West - Vineyard South

Located on the West side of Penn Center campus, situated on the Southeast corner of existing vineyard, is a large multipurpose building, built as a testament to Hastings Gantt, who made the Penn School possible. At its roots, this building intends to revitalize the purpose of Penn School's founding, which is a place of learning. Considering the longevity of Penn Center, this building intends to weave culture with sustainability, utilizing historic techniques of the southern vernacular whilst incorporating innovative contemporary methods like mass timber.
